

Controller Indicator Transmitter 1/32 DIN - 48 x 24 mm gamma**due**[®] series C1 line

Small, easy and comprehensive

Easy configuration and simple operating method. The smallest line of the gamma**due**[®] series concentrates the functionality of the temperature controller-indicator-transmitter without losing the typical characteristics of more complex devices like: autotune, IP65 front panel protection, serial communications,

analogue retransmission output, custom linearisation, and transmitter power supply.

the right solution to your needs

Your needs	Our solutions
Restricted space and reduction of the instrumentation overall dimensions	1/32 DIN - 48 x 24 Size
Easy replacement and quick start-up	Configuration by simple to use codes
Correct tuning for any condition	Automatic selection between two different methods
Conversion and retransmission of low level signals	Transmitter with isolated and analogue output
Contactless temperature measurements	Indicator with infrared input ability
Alarm signalling	Absolute and deviation alarms
Interfacing with other devices	Serial communications at 9600 baud Modbus/Jbus protocol, analogue retransmission output
Quick learning	Every model has the same operating method
Ergonomic compatibility with other devices	Two colours: beige or darkgrey front panels
Environmental protection	IP65 front panel protection (indoor, dust and water protection)
Easy to use	Ergonomic keypad, clear and comprehensive display
Noise immunity	Electromagnetic compatibility
Universal input signals, linear as well as non-linear	Configurable input (TC, RTD, mA, Volt and ΔT , infrared sensor, custom linearisation)
Reliability and safety	CE compatibility, ASCON is ISO 9001 certified, 3 years warranty
Technical support	Technical application assistance from ASCON sales and after sales service

Fuzzy Tuning

Two methods of tuning are available:

- **Auto-Tuning "one shot"**
- **Natural frequency "one shot"**

The **Fuzzy-Tuning** automatically selects one of the two methods which assure the best result for each condition.

The **Auto-Tuning** method works best on the step response basis.

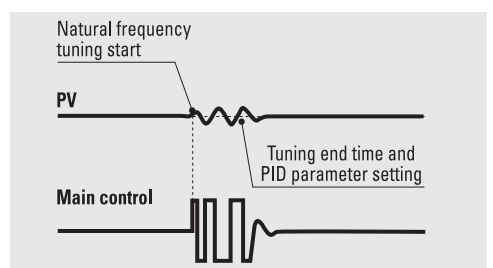

When activated, if a deviation exists between the Setpoint and process variable larger than 5% of scale range, the controller modifies the output value. Then, in a short time, it calculates the PID parameters and the new algorithm is operational immediately.

The main advantages of this method are fast calculation and quick implementation.

The **Natural frequency** method works best when the process variable is very near to the Setpoint. When activated, it causes a process oscillation around the Setpoint value.

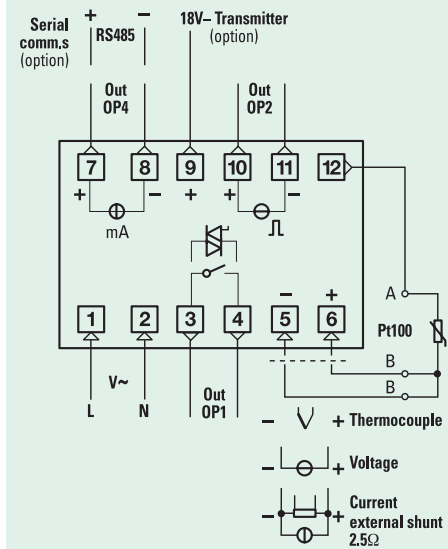

The main advantage of this method is a reduced disturbance to the process.

Technical data

Features at env. 25°C	Description	
Operational safety	Measure input	Detection of out of range, short circuit or sensor break with automatic activation of the safety strategies and alerts on display
	Control output	Safety value: 0...100%. (user enabled/disabled)
	Parameters	A non volatile memory stores for unlimited time all the parameter and configuration values
	Password	A password protects the access to the instrument configuration
General characteristics	Power supply	100-240V~ (-15% +10%) 50/60Hz or 24V~(-25% +12%), 50/60Hz and 24V- (-15% +25%). Power consumption 1.6W max
	Safety	Compliance EN61010-1 (IEC 1010-1), installation class 2 (2500V), pollution class 2, class II instrument
	Electromagnetic compatibility	Compliance to the CE standards for industrial system and equipment
	Protection EN60529 (IEC 529)	IP65 front panel
	Overall dimensions	$1/32$ DIN - 48 x 24, depth 120 mm, weight 100g appr. Panel cut-out: $45^{+0.6} \times 22.2^{+0.3}$ mm
