Cloud Historian

Canary Cloud is a secure solution that simplifies the collection, storage, and visualization of industrial data enabling more accurate decision making. Canary consolidates multiple process data sources from across your plant, entire organization, or from around the globe; granting your staff complete process visibility.

Right on Budget

Canary Cloud offers scalable solutions that allow you to grow your database alongside your business. Starting for just $195 per month, Canary provides all hosting services, as well as the necessary software to connect to your process data and run real-time data analytics, trend, build dashboards, and report. This simple-to-use tool will help you better understand your processes, limit downtime, and increase efficiency.

Solutions can be grown from just a few tags to several thousand, all without having to burden IT with database management or additional workload.

Solutions starting at $195 per month

Simple, Cost-Saving, Solutions

IIoT advancements make it possible to gather more and more data and make actionable insights that affect the bottom line. However, both staff and capital expense restraints are limiting companies' effectiveness. Canary Cloud addresses these concerns by providing a cost-effective software-as-a-service (SaaS) solution that by design is simple to deploy, manage, and afford. You determine who has access; they determine how best to save money and increase process efficiency. All the while, Canary reduces your IT burden and overhead by safeguarding your data and all applicable software in the Cloud.

OEM Opportunities

As a production equipment OEM or custom solution provider, leverage Canary Cloud to provide your customers with a solution that will build value in your current system and offer additional product features. What better way to demonstrate your product or service's ability to increase efficiency and reduce costs than to visualize it for your customer? In addition, you benefit from valuable data capture that assists with troubleshooting and warranty investigation. Since Canary manages the solution for you, there is no need to worry about system maintenance, version upgrades, or data migration.
